

Ilya Voitov

Unity Developer & Team Lead — Interactive Museum Exhibits & Immersive Installations

📍 Saint Petersburg, Russia | ✉ skaijidev@gmail.com | Telegram: @ivdevv | 📄 Portfolio & showreel: skaijidev.github.io

Open to international relocation and visa sponsorship. Available from August 2026 — immediately for interviews and technical assessments.

PROFILE

Unity Developer and Team Lead with **7+ years of professional Unity experience**, including **4+ years specialising in large-scale interactive museum exhibitions and immersive installations**.

I build touch-screen kiosks, interactive simulators, AR exhibits and deep custom hardware integrations — applications that must run unattended, 12 hours a day, in front of the public. As Unity Team Lead on the “Planet Ocean” exhibition at the Museum of the World Ocean — one of the largest museum projects in Russia, with 270+ installations — I led a team of 7 developers and owned the technical architecture from prototype to long-term on-site support.

EXPERIENCE

Unity Developer & Team Lead — Interactive Museum Installations

March 2022 – Present

Freelance / Independent Contractor — Saint Petersburg, Russia

Full-cycle development of large-scale interactive multimedia installations for museums and cultural institutions across Russia and Kazakhstan, in long-term collaboration with leading scenography and exhibition design bureaus (primarily Metaforma Museum Bureau).

Selected projects

- **“Planet Ocean” — Museum of the World Ocean, Kaliningrad (opened 2024).** Unity Team Lead on one of the largest museum projects in Russia: a 9,973 m² pavilion holding 270+ interactive installations across seven themed laboratories, many with complex custom hardware integration. Led 7 Unity developers and defined the shared architecture and reusable interaction framework used across the exhibition. Formats range from touchscreen kiosks and in-exhibit games to full simulators; several floors have not opened to the public yet and hold some of the project's most technically demanding exhibits.
- **“University in Bast Shoes” — Leo Tolstoy Yasnaya Polyana Museum-Estate (2025).** Team Lead for the interactive information system at the new Centre for Tolstoyan Pedagogy — touchscreen reference content for visitors, with educational game sections built into it, aimed at children.
- **“Valley of Glory” Museum & Exhibition Complex, Murmansk Region (2025).** Interactive installations for the memorial complex, including a searchable panel holding ~35,000 names of soldiers who fell on the Murmansk front.
- **Gazprom / Zenit FC Academy Museum (2023).** Touchscreen information kiosk built in Unity.
- **School Museum, Kolkent, Kazakhstan (2023).** AR experience with real-time recognition of wall illustrations.
- **“Road of Life” Museum, Kokkorevo (2022).** Suite of interactive installations — including an illuminated map model of the Lake Ladoga ice road driven by physical buttons — plus a custom CMS letting museum staff update exhibit content without developer involvement. Delivered in 5 months from concept to opening.
- **Further installations delivered over the same period** for museums and cultural institutions in Russia and Kazakhstan, including venues that are not open to the public. The projects above are the ones I am free to show.

Core responsibilities

- Scalable technical architecture and shared frameworks for multi-installation exhibitions
- Backend / API integration for dynamic, curator-editable content
- Deep custom hardware integration — sensors, buttons, controllers, physical interfaces
- Touchscreen kiosk software, in-exhibit games and interactive simulators
- 24/7 unattended stability, on-site commissioning, performance optimisation and long-term support
- Code quality, code review, technical specifications and delivery planning across the Unity team

Lead Unity Developer

February 2019 – March 2022

Production Company "Energoberezhnie" LLC — Petrozavodsk, Russia

- Developed interactive **Digital Twin** applications: real-time 3D representations of factories and production lines with live data visualisation
- Created 3D warehouse management systems with live inventory tracking and interactive navigation
- Optimised very large 3D scenes for stable real-time performance (occlusion, LOD, batching, memory budgeting)

Bitrix24 Developer

February 2017 – February 2019

Federated Cryptosystems — Petrozavodsk, Russia

- Customised and extended the Bitrix24 CRM platform: business process automation, custom modules and internal tools

SKILLS

Core	Unity (advanced), C#, HDRP / URP, real-time 3D, shader development, performance optimisation for large scenes
Domain	Interactive installations, immersive experiences, museum exhibits, AR, VR, kiosk applications, 24/7 stable systems
Systems	Custom hardware integration, backend API integration, dynamic content management, on-site deployment and commissioning
Engineering	Technical architecture & system design, Git, code review, technical specifications, full project lifecycle
Leadership	Team leadership, mentoring, delivery planning, on-site commissioning, client-facing delivery

LANGUAGES

Russian	Native
English	Professional working proficiency — technical documentation, codebases, day-to-day team communication

EDUCATION

2016	Game Developer (Unity) — GeekBrains, Moscow
2015	Information Systems Technician — Petrozavodsk Technical College

Interests: traveling, music (flute & guitar), stand-up paddleboarding, game design, camping.
